## Product Overview

Danish Agro Farms offers Milk Powder sourcing and supply solutions for food manufacturers, bakeries, confectionery producers, dairy processors, wholesalers, distributors, and commercial food-service businesses.

Milk powder is a versatile dairy ingredient produced by removing most of the water from milk under controlled processing conditions. It offers convenient storage, ease of handling, and flexibility for a wide range of food applications, including bakery products, beverages, confectionery, dairy formulations, desserts, and prepared foods.

At Danish Agro Farms, our approach focuses on sourcing milk powder from suitable suppliers, assessing product documentation, and aligning supply specifications with customer requirements. We aim to support consistent product quality through raw material evaluation, appropriate packaging, batch identification, and suitable storage and handling practices.

Our sourcing and supply arrangements can be tailored to the required milk powder type, application, packaging format, and agreed quality specifications.

## Key Features

- Quality-Focused Sourcing: Product selection according to agreed specifications and supplier documentation.
- Versatile Dairy Ingredient: Suitable for a wide range of food manufacturing applications.
- Product Variety: Whole milk powder and skimmed milk powder sourcing options, subject to availability.
- Functional Flexibility: Suitable for beverage preparation, bakery, confectionery, and dairy formulations.
- Bulk Procurement: Supply solutions for commercial and industrial customers.
- Customised Requirements: Specifications, packaging, and order quantities discussed according to customer needs.
- Traceability Support: Batch identification and supporting documentation, where available.

## Sourcing & Procurement

Danish Agro Farms works to source milk powder from selected suppliers according to customer specifications, availability, intended application, and commercial requirements.

## Depending on availability, product options may include:

- Whole Milk Powder (WMP): Contains a higher level of milk fat and is commonly used where a richer dairy flavour and composition are required.
- Skimmed Milk Powder (SMP): Contains substantially less milk fat than whole milk powder and is used in applications requiring dairy solids with reduced fat content.
- Other Milk Powder Grades: Additional specifications may be considered according to supplier availability and customer requirements.

Before order confirmation, customers can discuss milk powder type, fat content, protein content, solubility, heat classification where applicable, microbiological requirements, origin, and packaging preferences.

Country of origin, product composition, and relevant certificates or test reports should be confirmed against the documentation for the specific supplied lot.

## Product Specifications

## Parameter Description

## Product Name Milk Powder

## Brand / Supplier Danish Agro Farms

Product Category Dairy ingredient

Product Types Whole milk powder or skimmed milk powder, subject to availability

Raw Material Milk, according to the specific product specification

## Appearance Powder

Colour White to creamy-white, depending on product type

Aroma Characteristic dairy aroma

Flavour Characteristic milk flavour

Fat Content According to the selected product grade

Protein Content According to supplier specification

Moisture According to agreed specification and applicable standards

Solubility According to product grade and intended application

Country of Origin As declared for the supplied lot

Packaging Original supplier packaging or other agreed format, subject to availability

Quality Parameters According to product documentation and applicable requirements

Actual composition and specifications vary by product grade and supplier. Final parameters should be verified through the applicable product specification and certificate of analysis (COA).

Quality Assurance: From Supplier to Customer

At Danish Agro Farms, our quality-focused sourcing approach aims to maintain oversight throughout the supply chain, from supplier selection to delivery.
